

# Integration Services

## Key Benefits

Belvac is dedicated to providing our customers with products that maximize throughput and provide the highest return on investment. With 60 years of experience in the design and production of container-making machinery, we continuously engineer innovative solutions to improve quality and productivity.

Belvac provides cutting-edge-high-speed manufacturing solutions for complete metal can or bottle lines. Belvac's integration team consists of canmakers, integration specialists and service engineers to address your needs from conceptualization through qualification. Service and support are available globally to ensure production goals are met now and in the future.

Container Engineering Process affords your brand to differentiate products with exclusively designed containers. Our unparalleled on-site pilot line facilitates the design and testing of containers, ensuring our equipment is engineered for peak performance.

Belvac differentiates itself from competing integrators by providing complete solutions

Belvac Integration Services- Providing Cutting Edge, High Speed, Manufacturing Solutions

## Belvac's Five Stage Process

- Feasibility and Conceptualization
- Detailed Design and Engineering
- Installation and Training
- Commissioning and Optimization
- Lifecycle Support

utilizing our proven innovative technology. Manufacturing equipment for over 60 years allows us to apply our industry knowledge and provide the highest level of service. With highly trained service engineers operating in 49 countries, we are able to offer support services for all needs.
